Sequence 1, Application US/09410399

Patent No. 6482587

GENERAL INFORMATION:

APPLICANT: Robertson, Erle S.

APPLICANT: Cotter, Murray A.

TITLE OF INVENTION: Methods to Inhibit or Enhance the Binding of Viral

TITLE OF INVENTION: to Genomic Host DNA

FILE REFERENCE: UM-03778
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1878

Patent No. 5849564

Patent No. 5849564

GENERAL INFORMATION:
APPLICANT: Chang, Yuan
APPLICANT: Bohenzky, Roy A.
APPLICANT: Russo, James J.
APPLICANT: Edelman, Isidore S.
APPLICANT: Moore, Patrick S.
APPLICANT: MOORE, PATRICK S.
TITLE OF INVENTION: POLYPEPTIDES FROM TITLE OF INVENTION: HERPESVIRUS, DN

Sequence 72, Application US/09884441

Patent No. US20020119158A1

GENERAL INFORMATION:
APPLICANT: Algate, Paul A.
APPLICANT: ALGATE, Darrick

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THI
TITLE OF INVENTION: DIAGNOSIS OF OVARIAN CANCER

FILE REFERENCE: 210121.462C7

CURRENT APPLICATION NUMBER: US/09/884,441

CURRENT FILING DATE: 2001-06-18

NUMBER OF SEQ ID NOS: 489

SOFTMARE: FastSEQ for Windows Version 3.0

SEQ ID NO 72

LENGTH: 2017

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      antagonists of an Ese binding partner are used to treat diseases associated with undesirable endocytosis and resulting changes in cellular function. Particularly overexpression of Esel is used to block clathrin-mediated endocytosis in vivo or in cell cultures, while administration of (I) is used to promote endocytosis of selected cells. (Ant) agonists of (I) or Ab are used to suppress abnormal proliferation of cells that can be stimulated to proliferate by a growth factor receptor; and similar compounds (also inactive Ese mutants) can be used to prevent viral infection. Endocytosis may also be regulated, in vivo or in cell cultures, by forming an Ese-Espl5 complex, then binding dynamin to the complex. Generally conditions that can be treated include cancer; abnormal cell division or migration; viral infection; or abnormal receptor signalling, tissue development or synaptic transmission.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence encodes mouse Esel. The present invention specifically describes mammalian Esel and 2 proteins (I) and their splice variants (Ese = EH-domain and SH3-domain regulator of endocytosis). (I) are involved in regulation of clathrin-mediated endocytosis (as a complex with Espl5 protein), vesicular trafficking and actin cytoskeleton. Generally (I) (or its (ant)agonists, mimetics, fragments and inactive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   with Esp15 protein, vesicular trafficking and actin cytoskeleton. Generally (I) (or its (ant)agonists, mimetics, fragments and inactimutants); (I)-specific antibodies (Ab); sequences antisense to the polynucleotide; agents that downregulate expression of Ese genes or

                                                                                                                                                                                                                                                                                                                                                                                                                                    CC The present invention specifically describes mammalian Esel and 2 CC proteins (I) and their splice variants (Ese = EH-domain and SH3-domain CC regulator of endocytosis). (I) are involved in regulation of clathrin-CC mediated endocytosis (as a complex with Espl5 protein), vesicular (CC trafficking and actin cytoskeleton. Generally (I) (or its (ant)agonists (CC mimetics, fragments and inactive mutants); (I)-specific antibodies (Ab); (CC sequences antisense to the (I) polymucleotide; agents that downregulate (CC expression of Ese genes or antagonists of an Ese binding partner are (CC expression of Ese genes or antagonists of an Ese binding partner are (CC expression of Ese genes or antagonists of an Ese binding partner are (CC expression of Ese associated with undesirable endocytosis and (CC espliciting changes in cellular function. Particularly overexpression of (CC Esel is used to block clathrin-mediated endocytosis in vivo or in cell cultures, while administration of (I) is used to promote endocytosis of (CC elected cells. (Ant)agonists of (I) or Ab are used to suppress abnormal (CC proliferation of cells that can be stimulated to proliferate by a growth (CC elected cells. (Ant)agonists of (I) or Ab are used to suppress abnormal (CC elected cells. (Ant)agonists of (I) or Ab are used to suppress abnormal (CC ells in that can be stimulated to proliferate by a growth (CC ells that can be stimulated to proliferate by a growth (CC ells that can be stimulated to proliferate by a growth (CC ells that can be stimulated to proliferate by a growth (CC ells that can be stimulated to proliferate by a growth (CC ells that can be treated include (CC ells that can be ells that can be treated include (CC ells that can be ells that can be ells that can be treated include
                                                                                                                                                                                                                                                                                                                                 Query Match
